

Pigeonholes - Document Synchronization Solution for iPad

The Client: A leading Sales Force Automation Solutions Company

The Challenges:

- Needed a solution for distributing files from a Server to iPad devices.
- The document synchronization mechanism should be able to handle all type of files supported by iPad
- The administrator should be able to control the synchronization process.

The Need: The need for an iPad solution, that worked as a standalone or pluggable application, which communicated with the client server for synchronization

The Solution:

- Invenger developed an iPad Application called **Pigeonholes** to cater to this need
- Customer files and documents can be synchronized easily.
- File back-up is kept in the server and also in iCloud

The Benefits:

- Helps in organizing the files and documents of user
- Allows users to upload desired files to iCloud
- Easily access important files and documents by marking them as favorites
- Allows the user to open the files in Pigeon holes, from any other application
