

## Job Description

**Job Title:** DevOps Engineer

**Location:** Mangalore

**Overview:** We are looking for a skilled DevOps Engineer to join our team, responsible for designing, building, and maintaining the CI/CD infrastructure to support our product delivery. The ideal candidate will have extensive hands-on experience with various DevOps tools and frameworks, automation of deployment processes, and management of production environments.

**Key Responsibilities:**

- Understand the architecture of products to design and build solutions that increase build times.
- Define and design configuration management (CM) standards and processes, including checkout/check-in, merge, build, and release procedures.
- Comprehend product functionality in production and its deliverables structure.
- Automate the migration of release packages between environments, with the ability to perform this task manually when needed.
- Create standards and templates for release notes, including drafting release notes for each release.
- Design and implement an audit process to ensure the integrity of the release package baseline, leading audits as necessary.
- Review and improve existing configuration management processes for efficiency and effectiveness.

**Required Qualifications:** BE/MCA/M.Tech/M.Sc

**Desired Skills:**

- Hands-on experience designing, building, and maintaining CI/CD infrastructure.
- Extensive knowledge of DevOps tools and frameworks.
- Experience in automating the migration of release packages between environments.
- Proficient in deploying upgrades and fixes within production environments.
- Familiarity with ITIL tasks, particularly using ServiceNow for Release and Change Management.
- Expertise in disaster recovery, load-balancers, and high-availability cluster concepts.
- Experience with scripting tools such as Shell, Python, or Perl.
- Proficiency with source control revision tools like GIT, SVN, or equivalent.

**Preferred Experience:** Experience working in production environments with a focus on deployments, maintenance, and administration.
